COMMUNICATION REPORT

Person Contacted Mr. Wade Knight Project No. G-8026
Company US EPA Region IV Date 8/10/89 Time 9:20am
Address ESD - Laboratory Client PRPs
Athens, Georgia Re Medley Farm Site RI
Phase IA Ground Water
Telephone No. (404)546-2445 Telephone Conversation X
Recorded By Jim Chamness Office Conversation _____

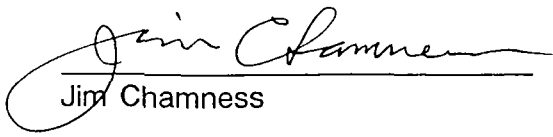

- Jim Chamness and Gordon Peterson contacted Wade Knight regarding the analyses of ground water samples collected on Tuesday, 8/8/89, after trying unsuccessfully to reach Mr. Jon Bornholm, the Superfund Project Manager for this project.
- The contract laboratory, Radian Corporation, contacted SEC yesterday, 8/9/89, to inform us that two(2) of the coolers of samples arrived with samples at a temperature of 15°C and the third cooler shipped that same day arrived with samples at 12°C. All coolers were tightly packed with a standard quantity of blue ice packs. Styrofoam chips were also enclosed to prevent container breakage.
- The integrity of the samples and the need for re-sampling was discussed. Wade Knight indicated that this is a common problem encountered in the summer months. Since the samples had been shipped the previous evening (approximately 18:30 hours) and were received in the morning (approximately 10:00 hours) and were still at temperatures below the ground water temperature at the time of collection, Wade recommended that SEC proceed with scheduled analyses.

Note: Contacted Jon Bornholm on Friday, 8/11/89 and explained the situation described above. Jon concurred with Wade Knight.
